

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	2 October 2026
Team ID	SWTID-2026-6545
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Authentication	User registration through form User login with email and password User logout
FR-2	Budget Planner Selection	Home Interior Planner Party Planner Jewelry Planner
FR-3	Budget & Preference Input	Enter budget and category details Enter preferences and contextual requirements Optional outfit image upload for Jewelry Planner
FR-4	AI Recommendation Generation	Process user budget and preferences Generate personalized recommendations Provide category-specific recommendations
FR-5	Platform Recommendation	Provide suitable product/service options from supported platforms Display recommendation details and budget fit
FR-6	Recommendation History & Personalization	Store/retrieve recommendation history Review previous queries and results Use available session information for personalized interactions

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The interface should be simple, responsive, and easy to use for entering budgets, preferences, and planner details.
NFR-2	Security	User authentication, session handling, API credentials, and protected routes should be handled securely.
NFR-3	Reliability	The system should validate inputs and provide consistent recommendations with fallback handling when results are insufficient.

NFR-4	Performance	Planner requests and AI recommendation results should be processed efficiently with a responsive user experience.
NFR-5	Availability	The application should remain accessible to users and its core planner and recommendation features should be available when the service is running.
NFR-6	Scalability	The modular backend and planner structure should allow additional categories, recommendation sources, and features to be added later.
