

Functional & Performance Testing Template

PocketSmart AI Model Performance Test

Date	02 October 2026
Team ID	SWTID-2026-6545
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Budget & Text Input Validation (budget, room details, event type, occasion)	Enter valid and invalid text and budget values in the Home, Party, and Jewelry planner forms	Valid inputs are accepted and invalid or incomplete inputs show appropriate validation messages	Valid inputs were accepted and invalid/incomplete inputs were handled with validation	Pass
FT-02	Number Input Validation (budget, guests, quantities)	Enter numbers within and outside the valid range for budget, guest count, and item quantities	Valid numeric values are accepted and invalid/out-of-range values are rejected	Valid numeric values were accepted and invalid values were handled correctly	Pass
FT-03	AI Recommendation Generation (Home, Party, Jewelry)	Provide complete planner inputs and click the Generate/Recommendation action	PocketSmart AI generates relevant budget-aware recommendations based on the supplied inputs	Recommendations were generated for the selected planner based on the entered	Pass

				budget and preferences	
FT-04	Gemini AI API Connection Check	Verify the configured Gemini API connection and send a sample recommendation request	Gemini AI responds successfully and the recommendation result is returned to the application	Gemini AI responded successfully and the generated result was displayed	Pass
PT-01	Recommendation Response Time Test	Use a timer to check the time taken to generate and display a recommendation	Recommendation results should be generated and displayed within an acceptable response time	Recommendation results were generated and displayed within an acceptable time during testing	Pass
PT-02	API Speed Test	Send multiple recommendation requests for different planner categories and observe response handling	API requests should be processed without significant slowdown or application failure	Multiple requests were processed without application failure or significant slowdown	Pass
PT-03	Jewelry Image Upload Load Test	Upload an outfit image in the Jewelry Planner and check image processing with recommendation generation	Supported images should be processed smoothly and used for style-matched jewelry recommendations without crashing	The uploaded outfit image was processed and used for generating jewelry recommendations	Pass
